DETAILED ACTION

This is an Allowance in response to After Final amendment submitted on 8-4-2010.

Terminal Disclaimer

1. The terminal disclaimers filed on 10-6-2010 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of each US 7,653,984 and US 12/635,094 (US Pub. No. 2010/0083486) has been reviewed and is accepted. The terminal disclaimer has been recorded.

Allowable Subject Matter

2. Claims 11, 13-17, 19-20 are allowed over the prior art of record.

3. The following is an examiner's statement of reasons for allowance: The claims in this application have been allowed because the prior art of record fails to disclose singly or in combination the claimed method of resin sealing permanent magnets in a laminated rotor core as claimed in independent claim 11, wherein resin reservoir pots are provided in the upper die and vertically penetrate the upper die, the resin pots in the upper die are in a region radially inward of and different from positions of the magnet insertion holes as viewed from a top thereof, and the liquefied resin material is supplied to the magnet insertion holes from the resin pots through resin passages formed on an undersurface of the upper die.

4. The closest prior art of record, Shiga et al, teach inserting magnets in insertion holes in a laminated rotor core, disposing the rotor core between a lower and upper die,

Art Unit: 1743

pressing and heating the rotor core and filling the insertion holes with liquefied resin material. Shiga et al do not disclose the upper die having the resin reservoir pots or the specific arrangement of such pots, or that said pressing and heating is done while heating and liquefying raw resin material, or that the liquefied resin material is being inserted from the upper die by ejecting the liquefied resin material from the resin reservoir pots by plungers, the plungers being inserted and moving vertically in the pots.

5. Osada et al teach upper and lower mold sections capable of having resin pots with plungers moving vertically up and down, but do not teach such pots are positioned radially inward of and different from positions of the magnet insertion holes as viewed from a top thereof, or the liquefied resin material is supplied to the magnet insertion holes from the resin pots through resin passages formed on an undersurface of the upper die.

6. Further, since Shiga et al teach a process for the joining/sealing a frame and magnets at the same time to the core, with resin is inserted thereafter to seal the preceding all in one setting, a gap would be required between the frame and core for the resin. Therefore, one would not be able to form Shiga's product if one were having resin pots come from an upper die as per the instant claimed invention. Shiga would not be able to be modified with aspects of Osada, or with any arrangement having resin pots and plungers in the upper die with the claimed arrangement without having to redesign the device and process of Shiga or remove the intended function of the Shiga process.

Art Unit: 1743

7. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
